

MetaVis ARCHITECT for SharePoint allows information architects to develop and maintain efficient taxonomies structures in SharePoint 2010, 2007, 2003, BPOS and Office 365 SharePoint. Through two-dimensional graphical diagrams users can edit diagram elements and provision or synchronize updates to SharePoint. **ARCHITECT** provides a system-wide awareness of your SharePoint environment necessary to design taxonomies that improve search and eDiscovery. MetaVis diagrams not only expose metadata structures but also their relationships, making SharePoint sites easily understood.

MetaVis ARCHITECT lets you easily create a SharePoint taxonomy graphically. It connects to SharePoint and compares the new design versus the current environment and can automatically deploy individual, selective or all changes to your environment in seconds.

Built on the **MetaVis** Information Architecture Platform, **ARCHITECT** allows users to easily add other **MetaVis** products such as migration, classification and change management. Using ONE interface, users have all the tools to design, migrate, manage and organize SharePoint.

MetaVis products do not require any components or agents installed on the SharePoint server making it ideal for Office 365 or other hosted environments.

- *Create and reorganize metadata to improve Search, Findability and eDiscovery*
- *Reuse entire taxonomies or individual metadata types from other places by simply dragging them into the diagram*
- *Provision to any SharePoint Site or Server (internal or hosted)*
- *Compare sites and pinpoint differences between content, information architecture or permissions*
- *Set up new sites in seconds*
- *Create, modify, and remove lists & libraries easily*
- *Document & Annotate diagrams for future reference*
