

CHANGE MANAGER for SharePoint

MetaVis CHANGE MANAGER for SharePoint provides organizations with a controllable and repeatable way to automate, manage and deploy changes, taxonomy updates and structure between multiple SharePoint or Office 365 SharePoint environments. Organizations can then easily synchronize changes across development, staging and production environments to ensure consistency. With **CHANGE MANAGER** companies have more control over how they administer changes in SharePoint to improve overall governance and organization.

MetaVis CHANGE MANAGER audits and tracks changes using both high-level and granular reports that detail the difference between SharePoint objects including site collections, sites, lists, libraries, fields, content types, folders, Web parts, workflows InfoPath forms, Term Stores, etc.

CHANGE MANAGER helps automate IT change management processes including:

- Disseminating to or bringing back changes from development, staging to production environments;
- Scheduling recurring activities; and
- Pushing software updates.

Built on the **MetaVis** Information Architecture Platform, **CHANGE MANAGER** allows users to easily add other **MetaVis** products such as design, migration and classification. It supports SharePoint 2010, 2007, 2003, BPOS and Office 365.
