

## CLASSIFIER for SharePoint

**MetaVis CLASSIFIER** lets users organize SharePoint 2010, 2007, 2003, BPOS and Office 365 SharePoint content. Apply metadata and relocate files in bulk, with regulatory data, retention dates, and useful keywords in just a few clicks. With **CLASSIFIER**, you can classify legacy or imported content to unlock the full potential of SharePoint search and relocate content into the right folders, lists, and sites to maintain its accessibility, security, retention, and lifecycle policies.

**MetaVis CLASSIFIER** supports SharePoint 2010 Managed Metadata tagging such as Term Stores and Document Sets making it easier for users to take full advantage of SharePoint 2010 functionality.

**CLASSIFIER** accelerates and encourages the assignment of metadata making content more "findable", compliant and usable. It is agentless and does not require users to install server side components – making it ideal for classifying content in the cloud.

Built on the **MetaVis** Information Architecture Platform, **CLASSIFIER** allows users to easily add other **MetaVis** products such as design, migration and change management.

- ***Change content type for multiple documents or list items***
- ***Assign column values for multiple documents or list items***
- ***Relocate several selected list items or documents to different folders, lists, or sites and simultaneously change or keep items content types and column values***
- ***Copy values between columns***
- ***Filter items in lists based on the user-defined criteria***
- ***Analyze existing items in lists to ensure all values are in columns of the selected items***
